

ASH

Communications

wireless communications consultancy and training

February 2010

To whom it may concern:

Reference: Miranda Edge

I am director of ASH Communications Ltd in Southampton, UK, which has employed Miranda Edge from 16th July 2009 to date as a full-time Software Engineer after contracting with us full-time from 16th March 2009. I can offer the following information from my personal experience of Miranda:

ASH Communications is a design consulting company specialising in the field of short-range radio products in the avionics, consumer, and business-to-business sectors.

Miranda is employed to perform software development for pc application software, networking, and real-time microprocessors. She works with a team of 4 other development engineers, using mainly the C++, C# languages. She has so far been instrumental in the design and development of network controller software for a real-time locating system. She has also worked on implementing real-time routines on 8-bit processors.

Software development is carried out using peer-reviewed assurance techniques and standard version control systems. We are pleased with Miranda's work and confident that once a specification is set, the implementation will be performed and tested expertly and efficiently. Miranda is a valued and important member of our team, and I commend her to you.
