

To whom it may concern,

I can confirm that Miranda Edge has provided software development services in the capacity of Analyst Programmer at GE Aviation, Bishops Cleeve, Cheltenham from 17 May-2010 through to the 29 July 2011.

Initially the work involved concept exploration of various CDS (cockpit display system) components using GL studio/Open GL and C++ for modelling a checklist function. After succesfull completion, Miranda was assigned to the development of ARINC 661 Map components. The tools used were C/C++ Visual studio and Eclipse/Java along with Presagis VAPS-XT.

Althought I did not work directly with Miranda, the feedback from her manager was that Mirandas performance met expectations in what was delivered against the budget and time allocated.

It has also been confirmed to me that Miranda has an expert level knowledge of C/C++ programming and delivered quick results to GE Aviation that were of a high quality.

Miranda's line manager at GE Aviation has confirmed that he would highly recommend Miranda and would utilise her service's again.

Yours faithfully

Andrew Jardine
Senior Account Manager
